SUPERIOR DESIGN FOR ULTIMATE CONVENIENCE

VertiRack™ Industrial Wall Mount Ladder Rack

VertiRack™ Vertical Ladder Racks mount to any wall in your industrial or commercial setting, offering a convenient and safe way to store your ladders.

Our industrial wall mount ladder rack provides safe, strong, out of the way storage of extension and step ladders in your facility. Ladders are hung on the wall mount ladder rack in a vertical orientation and secured in place via our high strength, easy to use ladder securing straps. Ladders can also be secured against theft or unauthorized use by the optional ladder lock assembly, which is available for any size wall mount ladder rack.

Ladder storage in industrial settings is a difficult task, where do you locate your ladders where they will remain safe and undamaged, yet be close by when needed. Ladders usually end up being stored lying flat in stacks that are difficult to go through and invite other stored items to be placed on top of them; or leaning against a wall, where they can be knocked over and damaged. **VertiRack™ Vertical Ladder Racks** allow ladders to be stored out on the plant or warehouse floor in a convenient location, but up out of the way of danger and potential damage.

VertiRack's infinitely adjustable ladder racks enable the user to position the ladder support arms and the ladder securing straps at any position along the ladder rack's height. This adjustability allows fine tuning ladder placement on the rack after the ladder rack has been mounted. The ability to adjust the ladder rack also allows users to offset the ladder support arms and ladder securing straps to accommodate multiple step ladders in the least amount of space. Storing step ladders and/or extension ladders is as easy as configuring the ladder rack to hold the desired combination of ladders. The use of rubber treaded ladder support arms and transportation grade rubber, ladder securing straps, isolate ladders from rack contact, eliminating ladder wear.

Made in the USA; **VertiRack™ Wall Mount Ladder Racks** are manufactured of industrial grade, anodized aluminum extrusions, which are internally reinforced, providing evenly distributed weight capacities of over 100 lbs. per ladder support arm. These are not ladder hooks sold at the home centers. These extrusions are comparable in strength to 1-1/2" square, 1/8" wall, welded steel tubing, at 2/3 the weight.

Anodized aluminum extrusion construction means no maintenance; no painting, no rusting, no chalking or blackening of the aluminum. **VertiRack™ Wall Mount Ladder Racks** also feature the exclusive use of stainless steel hardware in their construction.

VertiRack™ supplies 3/8" thick UHMW-PE high strength standoffs to space the ladder rack off the wall, thus accommodating irregularities in block and poured concrete walls.

VertiRack™ Wall Mount Ladder Racks are drilled and counter bored at the top and bottom of the ladder rack's vertical rail to accommodate the 5/16" dia. hex socket head cap screws, or the 1/4" hex washer head lag screws, supplied with your chosen mounting kit. Mounting kits supplied with your wall mount ladder rack are available in your choice of hollow or solid wall mount types.
