**SUPERIOR DESIGN FOR ULTIMATE CONVENIENCE**

**Side Mount Surfboard/SUP Rack**

VertiRack Manufacturing Co. is the inventor and manufacturer of the fully adjustable side mount aluminum ladder rack.

In response to multiple requests from surfers and stand up paddlers over the years, **VertiRack™** has designed a side mount, surf/paddle board rack from the ground up.

The design of VertiRack's Vertical Board Rack starts with a board support arm featuring a flexible rubber "V" shaped board resting pad, one that pivots into the curve of the board, gently cradling the shape of the board while avoiding pressure points that could mark the fragile edge of the board. The board is kept from contacting the racks vertical members by a large diameter, board isolation pad.

While the board's weight is being supported by the board support arms, the surfboard is securely held in place by the board securing straps. These securing straps are 1 1/2" wide 1/4" thick, adjustable rubber straps with a very high breaking strength. The securing straps, board resting and isolation pads are all molded of transportation grade rubber which is impervious to road chemicals and is UV resistant.

We believe in giving the customer a rack that offers infinite adjust ability, strong, easy to use componentry while being manufactured of only the finest materials. All of VertiRack's racks are constructed of industrial grade, clear anodized, internally reinforced aluminum extrusions, utilizing stainless steel hardware for a rust free rack that retains its good looks for life.

We offer these board racks in a variety of mounting options to fit just about any vehicle and our superior design provides board racks that can be adjusted to the size and shape of the boards being transported, in a product that lasts a lifetime.
