

VertiRack™

SUPERIOR DESIGN FOR ULTIMATE CONVENIENCE

Roof Track Mount Surfboard/SUP Rack

VertiRack™ is proud to introduce its new, NO DRILL, Sprinter Van Board Rack.

Mercedes cargo van option D13 adds roof mounted C-rails to the Sprinter's roof to accommodate roof mounted ladder and cargo racks.

VertiRack™ has carefully designed a new rack that mounts to the longitudinal C-rail on the van roof and is held securely to the van sidewall using proven vacuum mount technology. Thus creating a no drill, fully adjustable, re-moveable Surfboard/SUP rack for the side of your fully converted Sprinter van.

Our C-rail mount rack is thus, easy to install, adjust and remove. Allowing this rack to be transferred to another Sprinter or a new vehicle purchase. Aftermarket C-rail kits are currently available for all the new popular high roof vans.

A drill through mount side rack, makes the location of the rack's vertical rails finite, thus setting the distance between the rails during installation sets the rack up for either carrying short boards or long boards but not allowing the distance between them to be changed to accommodate the other.

Full adjust ability of the rack's location on the length of the vehicle, distance between the racks' vertical rails, and vertical location of the pivoting vacuum mounts makes this rack's location on the vehicle side infinite. Thus allowing the rack to be configured to carry anything from a short board to an SUP.

The above features are in addition to the standard measures we utilize for securing your Surf or Stand Up Paddle Board: pivoting board support pads attached to the adjustable board support arms, adjustable board isolation pads and the wide rubber board securing strap; all cradling your board safely and securely with no board to metal contact.

As usual all our racks are constructed of industrial grade, clear anodized, internally reinforced aluminum extrusions, utilizing stainless steel hardware for a rust free rack that retains its good looks for life. All of our rubber components are molded of transportation grade rubber, that is not affected by hot or cold climates and is UV resistant.
