

VertiRack™

SUPERIOR DESIGN FOR ULTIMATE CONVENIENCE

VertiRack™ Vertical Ladder Racks

VertiRack™ patent pending **Vertical Ladder Racks** offer the ultimate convenience in ladder transport. Stowing ladders on the side of the truck makes loading and unloading ladders much easier than it ever was before.

VertiRack's infinitely adjustable aluminum rails enable the user to position the ladder support arms and securing straps at any position along its height. This adjustability allows fine tuning ladder placement on the truck *after* the rack has been mounted. The ability to adjust the rack also allows users to offset the ladder supports and securing straps to accommodate multiple step ladders in the least amount of space. Transporting step ladders and/or extension ladders is as easy as configuring the rack to hold the desired combination.

If your ladder needs change you simply reconfigure the rack to the ideal layout to support it's new load.

VertiRack™ Vertical Ladder Racks mount easily to any flat sided vehicle. They can be mounted outside or inside the body.

Ladder support arms can be placed on one side, or both sides of the vertical rails. When mounted to extend above an open service body, ladders can be placed directly opposite each other on the rack.

Rack mounting is accomplished by bolting through the vehicle body from the inside; which can be done at any location along the vertical rail. If through bolting doesn't work for you, **VertiRack™** can counter bore holes through the rails at your desired locations. This allows for blind hole mounting into body inserts from the outside.

Standoffs space the ladder rack off the truck body protecting it from rack damage, and the full height vertical rails protect the truck from ladder damage.

VertiRack™ Vertical Ladder Racks are available in a wide variety of standard sizes and configurations, from a garageable enclosed service body to a full size box truck. If you need a size or configuration not shown in our price list, just call us for information. We offer non-standard sizes and configurations at standard pricing.

VertiRack™ Vertical Ladder Racks are the only infinitely adjustable, side mounted, vertical ladder rack available. They offer full or partial height vertical rails with adjustable ladder support arms and ladder securing straps.

Stowing ladders is as simple as placing the ladders on the support arms and hooking the securing straps.

Removal is just the opposite; unhook the ladder securing straps and lift the ladders from the ladder support arms.

VertiRack™ products feature 6105-T5 high strength, anodized aluminum construction, with stainless steel hardware; for a lifetime of oxidation free and rust free service.

VertiRack's Ladder Securing Straps are molded of transportation grade rubber which is impervious to hot or cold climates and is UV, salt and chemical resistant.

Our rubber treaded Ladder Support Arms and Ladder Securing Straps isolate ladders from rack contact eliminating ladder wear.

The Ladder Securing Straps wrap up neatly and securely for travel when not in use.

Ladder rack Standoffs space the ladder rack off the truck or trailer body, protecting the body from ladder rack damage; and are available in a variety of lengths to accommodate body reinforcing ribs and rub rails.

VertiRack™ Vertical Ladder Rack Configuration Examples

Full height vertical ladder racks provide maximum capacity on box body trucks. Aluminum or FRP, **VertiRack™** works equally well. The ladder supports can be offset for multiple step ladder applications, allowing alternating the direction of the stepladders; fitting multiple stepladders in the least amount of space.

Enclosed cargo trailer with 2 rail 2 ladder rack sized to accommodate an extension and step ladder combination. Vertical ladder racks can be sized to span the entire side of the vehicle, or just large enough to hold the desired ladder, or combination of ladders.

VertiRack™ offers utility bed truck owners the ability to carry 1 or 2 ladders without creating an overhead obstacle. This 2 rail 1 ladder rack features longer vertical rails and mounts to the inside surface of the open bed. Another set of ladder supports and securing straps added opposite the initial set, make it a 2 ladder rack.

VertiRack™ Vertical Ladder Racks are ideally suited for enclosed service body applications. Single or double ladder racks, make ladder access easier than roof mounted ladder racks.

VertiRack™ Vertical Ladder Racks fit straight or sloped sided bodies, smooth or ribbed steel; aluminum or fiberglass.

Sprinter vans are another perfect application for vertical ladder racks.

VertiRack™ manufactures both 1 and 2 ladder racks to fit high roof sprinter vans.

VertiRack™ vinyl coated, stainless steel cable lock assembly (right).

Aluminum and stainless steel pipe carrier door and mounting kit.
